water—disparities that globalization only exacerbates. Drawing on anthropological studies and using social science theories, methods, concepts, and techniques, the authors explain the global processes affecting water management and health equity. The Globalization, Water & Health

1 Water quality issues are a major challenge that humanity is facing in the twenty-first century. Here, we review the main groups of aquatic contaminants, their effects on human health, and approaches to mitigate pollution of freshwater resources. Emphasis is placed on chemical pollution, particularly on inorganic and organic micropollutants including toxic metals and metalloids as well as a ... Global Water Pollution and

... Globalization of Water examines the critical link between water management and international trade. Local water depletion and pollution are often closely tied to the structure of the global economy. With increasing trade between nations and continents, water is more frequently used to produce exported goods. Globalization of Water: Sharing the Planet's Freshwater ... Threats to potable water is arguably one of the most critical environmental challenges in developing economies, given its links to health, education, and productivity outcomes. Unsafe water kills an estimated 1.7 million people annually, particularly as a result of diarrheal

## Crisis in Developing
